

Create a Log Management Service

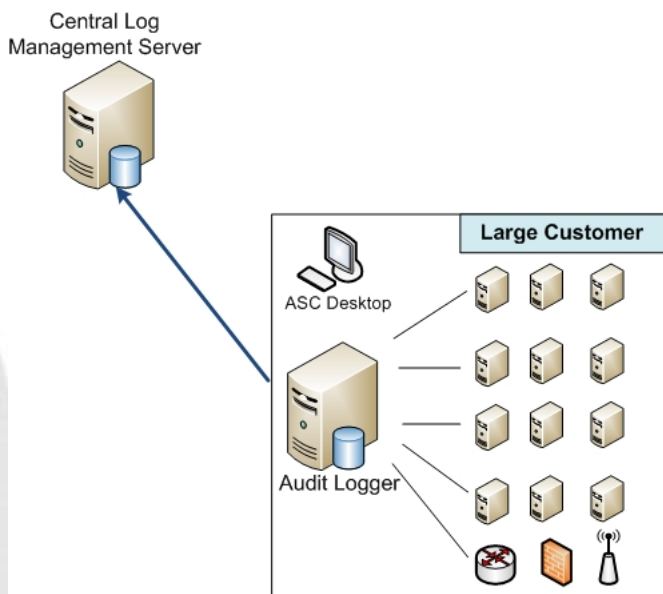

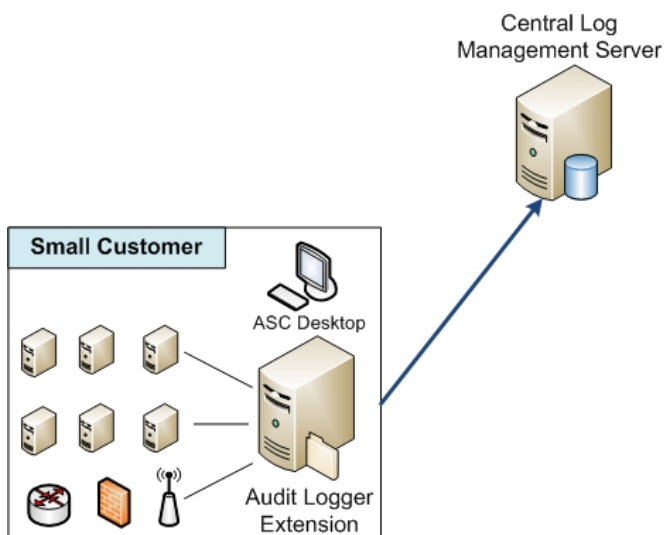

- Centrally log data from a large number of individual customers with a single install.
- Software is cost effective for very fast ROI.
- Software is modular; buy individual pieces to add a new customer, not a whole appliance.
- Separate customer data into individual data stores.
- Manage multiple instances of standard IP addresses without conflict.
- Easily localize storage with scheduled data transfer at non-peak times to conserve bandwidth.
- Store data in a single or separated data store.

Add Other Activeworx Components for Additional Revenue Streams

Add powerful, simple, and cost effective addition of Security Information and Event Management for each customer available.

Add powerful correlation capabilities for security alerting.

Granular permissions allow customers and auditors access to real data without compromising other customer data.

For Large or Small Installations

Modular components allow larger customers to keep the data local. Service providers can offer on-site managed services.

Capture all network traffic and write to disc in raw, unaltered form, with MD5 check sum.

Collect events in excess of 50,000 events per second.
